

Damage Modifiers

The damage values you can see in the description of a unit are not the final amount you will deal. In CoN there exist several mechanics that modify the amount of damage you can deal to an enemy.

The following mechanics can affect the damage output of a unit:

- Terrain boni and penalties
- Entrenchment
- Officers / Army Boost
- Overstacking
- Unit HP
- RNG
- Overkill

Its important to note that the “Defensive Rating” of a unit that not reduce the amount of damage it takes, rather this is the amount of damage it deals to every unit attacking it.

Terrain

Terrain modifiers can be found in the description of a unit and apply as long as the unit is on the corresponding type of terrain.

For example: Motorized Infantry gets a +25% to its Defensive Rating when in Urban and Suburban terrain, this is not limited to sitting in the center of a province but rather as long as the Infantry is anywhere in a province with the right terrain.

Basic Infantry (Motorized Infantry)

Requirements

Sight Range	25	35	25	25	25	25	25	25	25

Entrenchment

Entrenchment is a damage reduction you receive as long as you are in the center of a province or very very close to the center, it reduces any received damage by 25%. This reduction can be increased by building bunkers / combat outposts in the respective city / province.

If your unit gets the damage reduction from Entrenchment you will see a small icon.

Officers and Army Boost

Officers and some Elite Units have an ability called “Army Boost”, this gives other units of a certain type that are in the same stack a bonus to speed and/or damage.

Exceptional Pilot (Rotary Wing Officer)

Rotary Wing Officers are exceptional pilots who strengthen your nation's helicopter squadrons and push them to new heights in your campaigns against enemy forces. At later ranks - they come equipped with missile hard-points, and ASW equipment - opening up new potential operational capabilities.

Features

Army Boost

Officer grants combat bonuses to units in his army, including himself.

Overstacking

There is a limit to how many units you can put in the same stack while maintaining 100% efficiency. The limits are:

- 10 for Ground Units
- 5 for Naval and Air Units

Putting more units into a stack will result in a decrease of damage and speed of the whole stack, this is highlighted by an arrow next to the stack icon.

Unit HP

As units lose HP, the amount of damage they can deal diminishes.

RNG

RNG (Random Number Generator) refers to the “Random Factor” applied to damage. Every time you deal damage to a unit the game picks a random number which results in dealing 80% - 120% of the expected damage. This RNG is the same across all units.

Overkill

Overkill is a mechanic that reduces the amount of damage an attacker can deal to a target in a single attack unless he has an absurd damage advantage. This mechanic prevents you from dealing more than 33% of a units HP as damage and effectively makes killing enemies in one hit significantly harder.
